KV6002 Team Project
LSEPI & Security

The Royal Academy of Engineering funded a Visiting Professorship in Practical Cybersecurity Insights at Northumbria University, 2019–2022. These slides are a slightly modified version of those delivered, intended to be available after the project has ended

Green Pike

Today

- Recap of some general project issues
- (Maybe revisit some slides from last time. . .)
- Some points for you to consider
- The remaining time for you to ask questions. . .

. . . or "what is the point of your project"?

Do you have an "elevator pitch"?

1. Why should anyone else care?
2. What problem does it solve?
3. What interesting results are there?

What is the *scope* of your project?

- What should be complete and working well as part of the "core" project?
- Are particular issues specifically "out of scope"?
- What are nice "extras" that are "easy" wins?
- What could someone do to extend your project in future?

Justify yourself!

- *Why* did you choose that/those language(s)?
- *Why* that database, IDE and/or framework?
- *Why* did you choose that platform / cloud environment?

Pike

What is exciting?

1. What's great about your project?
2. What will make an interviewer take interest?
3. What was challenging? How did you solve those challenges?

But remember LSEPI

- **L**   legal,
- **S**   social,
- **E**   ethical, and
- **P**   professional

issues

- Did your project have any issues to address? If so, how?
- If someone deployed your project, what issues would need addressing? How could they be addressed?

Phil Brooke
A *Royal Academy of Engineering Visiting Professor* in Practical Cybersecurity Insights
Northumbria University

Green
Pike

- What assumptions have you made?
- What personal data does your project process? What other data is processed?
- Is your project free of security issues?
    - How do you know it's free of issues...?
- What controls would be required to deploy your project? (Why?!)
